How to find backend code

The following are only examples of one type. There may be other files or folders with different names. e.g. internalApi, ghcApi, documents.go, tags.go, etc.

MyMove Folder

- **swagger/**
- **pkg/**
  - **handlers/**
  - **services/**

<API>.yaml ← These names will match → **<API>api/**

/paths

tags ← These names will match → **<tag>.go**

operationId ← These names will match → **<operationId>Handler**

services.<serviceObject><Action> ← The names are related. e.g. service_object → **<serviceObject>/**

The names are related. e.g. service_object_action → **<serviceObject>_<action>.go**
